

Curriculum Vitae

————— Dominic W. Berry —————

Address: Department of Physics and Astronomy, Macquarie University,
NSW, 2109, Australia.
Telephone: +61 2 9850 6370
Fax: +61 2 9850 8115
E-Mail: dominic.berry@mq.edu.au
Website: <http://www.dominicberry.org>
Nationality: Australian

Positions Held

- ⊕ **Senior Lecturer**
Macquarie University, October 2015 – Present
- ⊕ **ARC Future Fellow**
Macquarie University, October 2011 – October 2015
- ⊕ **Postdoctoral Fellow**
University of Waterloo, January 2009 – September 2011
- ⊕ **Research Fellow (Level B)**
Macquarie University, September 2006 – December 2008
- ⊕ **ARC Australian Postdoctoral Research Fellow**
The University of Queensland, June 2004 – August 2006
- ⊕ **Macquarie University Research Fellow (Level B)**
Macquarie University, January 2003 – June 2004
- ⊕ **Research Associate**
Macquarie University, August 2001 – December 2002
- ⊕ **Tutorial Assistant**
The University of Queensland, March 1998 – June 2001

Education

Course: Doctorate of Philosophy
The University of Queensland
Field: Physics
Thesis Title: Adaptive Phase Measurements
Supervisor: Prof. Howard Wiseman
Award Date: February 2002
Attended: January 1998 – July 2001

Course: Bachelor of Science, Honours
The University of Queensland
Major: Physics
Thesis Title: Heating Effects in Optical Trapping
Supervisors: A/Prof. Norman Heckenberg and Prof. Halina Rubinsztein-Dunlop
Graduation Date: August 1997
Result: Class I
Attended: July 1996 – June 1997

Course: Bachelor of Science
The University of Queensland
Major: Physics
Graduation Date: December 1995
Grade Point Average: 6.9/ 7.0
Attended: January 1993 – December 1995

Citations

My papers have been cited a total of 2672 times (from Google Scholar on 16/05/2017), with three cited more than 200 times:

1. B. L. Higgins, D. W. Berry, S. D. Bartlett, H. M. Wiseman, and G. J. Pryde, “Entanglement-free Heisenberg-limited phase estimation”, *Nature* **450**, 393 (2007). 332 citations
2. D. W. Berry, G. Ahokas, R. Cleve, and B. C. Sanders, “Efficient quantum algorithms for simulating sparse Hamiltonians”, *Communications in Mathematical Physics* **270**, 359 (2007). 246 citations
3. D. W. Berry and B. C. Sanders, “Optimal remote state preparation”, *Physical Review Letters* **90**, 057901 (2003). 214 citations

I have 26 papers with 26 or more citations, so my h-index is 26. Hirsch (the inventor of the h-index) suggested that a value of about 18 would be a typical value for advancement to full professor.

Successful Competitive Research Grants

| Project Title | Investigators | Scheme | Value | Year |
|---|--|--|-----------------------------|------|
| Quantum algorithms for computational physics | DW Berry, G Brennen, A Aspuru-Guzik, AM Childs, J Pachos | ARC Discovery Project | \$145200 | 2016 |
| | | | \$145200 | 2017 |
| | | | \$145200 | 2018 |
| Quantum algorithms for partial differential equations | DW Berry, S Lloyd, A Harrow, AM Childs | IARPA BAA | \$586000 (421000 USD) | 2016 |
| Robust quantum information and metrology | DW Berry | ARC Future Fellowship | \$168083 | 2010 |
| | | | \$139088 | 2011 |
| | | | \$139088 | 2012 |
| | | | \$139088 | 2013 |
| Resources for quantum networks | DW Berry | ARC Discovery (APD Fellowship) | \$71122 | 2004 |
| | | | \$67922 | 2005 |
| | | | \$70422 | 2006 |
| Theory of resources for quantum networks | DW Berry | Macquarie University Research Fellowship | \$57866 | 2003 |
| | | | \$62165 | 2004 |
| | | | \$62165 | 2005 |
| Remote implementation of operations | DW Berry | Macquarie University Startup Grant | \$6000 | 2003 |
| Quantum Properties of Distributed Systems (QUPRODIS) – part of European Fifth Framework project | BC Sanders SD Bartlett DW Berry | IAP – International S&T Competitive Grants | \$15000 | 2003 |
| | | | \$15000 | 2004 |
| | | | \$15000 | 2005 |

Fellowships, Scholarships, Awards and Competitions

- Australian Research Council Postdoctoral Fellowship, 2004-2006
- Macquarie University Research Fellowship, 2003-2005
- APA Scholarship, 1998-2001
- University Medal at the University of Queensland, 1997
- The Duncan McNaughton Scholarship, 1996
- Australian Students Prize for Excellence, 1993
- Year 11 (1991) and Senior Dux (1992) at Wynnum High, 1991-1992
- Junior Dux of Science at Wynnum High, 1990
- Inaugural Mathematics Tournament, gold medal, 1990
- The Australian Mathematical Olympiad, silver certificate, 1992

Research Highlights

- Simulation of quantum systems is one of the most important potential applications of quantum computers, with applications in design of molecules. In 2007 I developed what was then the most efficient known algorithm for simulation [41]. This work now has **246 citations**, and forms the basis for exciting developments in quantum algorithms, including evaluation of NAND trees (A. M. Childs *et al.*, *Theory of Computing* **5**, 119 (2009)), and solving systems of linear equations (Phys. Rev. Lett. **103**, 150502 (2009)). I also used it to show how to solve differential equations on a quantum computer [17,73]. This is an application of tremendous importance, because most applications of supercomputers are based on solving large systems of differential equations.

Since the work in [41], I have developed a series of progressively more advanced techniques for simulation, driving towards the limits of what is theoretically possible [7,11,19,21,27,63,64]. This work has won much acclaim, resulting in talks accepted at both the two top computer science conferences **STOC** and **FOCS**, as well as four talks accepted at the top quantum information conference, **QIP**.

I have also been collaborating with Alán Aspuru-Guzik at **Harvard** University to apply these techniques to quantum chemistry [10,74]. Together with Andrew Childs at University of Maryland, another of the top researchers in quantum algorithms, we have been successful in winning a Discovery Project for this work.

I have also been developing links with industry and the intelligence community for this research. Together with Aram Harrow and Seth Lloyd at **MIT**, I developed a project for this topic for IARPA, which is responsible for leading research to overcome difficult challenges relevant to the United States Intelligence Community. This project was funded for more than half a million dollars. I am now in talks with the Senior Scientist at Lockheed Martin for another a research project on quantum algorithms.

- I developed, in collaboration with Howard Wiseman and Stephen Bartlett, a method for performing the most accurate possible phase measurements. This method is based on a linear optics implementation of the inverse quantum Fourier transform in quantum computing theory. This brings together techniques from quantum control, quantum metrology, and quantum computing. It was implemented experimentally at Griffith University, and appeared in Nature [38]. This work has been the subject of many reviews and media reports:
 - Nature Milestones: Photons (2010), chose this paper for the Fundamentals NPG library; one of 11 reprinted papers in Nature Publishing Group journals, covering the period 1926-2010. <http://www.nature.com/milestones/milephotons/library/fundamentals/index.html>
 - “Quantum physics rules”, Australian Research Council inaugural publication, Outcomes: Results of research in the real world ‘08, p. 60.
 - “World’s most precise ruler created”, *Australasian Science*, April 2008, p13.
 - J. L. O’Brien, “Precision Without Entanglement”, *Science* **318**, 1393 (2007).
 - J. P. Dowling, “Kittens catch phase”, *Nature* **450**, 362 (2007).

Top 10 Publications

- (1) D. W. Berry, A. M. Childs, and R. Kothari, “Hamiltonian simulation with nearly optimal dependence on all parameters”, in *Proceedings of the 56th Annual IEEE Symposium on Foundations of Computer Science (FOCS 2015)*, pp. 792-809 (2015).
Accepted for the highly prestigious conference [FOCS](#); one referee described this work as a “*tour de force*”. **28** citations.
- (2) D. W. Berry, M. Tsang, M. J. W. Hall, and H. M. Wiseman, “Quantum Bell-Ziv-Zakai bounds and Heisenberg limits for waveform estimation”, *Physical Review X* **5**, 031018 (2015).
Physical Review X is a new journal that has the highest impact factor (9) of any Physical Review journal. One referee described this work as a “*tour de force*”. This work introduced a radical new approach to finding the limits to accuracy of measurement. **22** citations.
- (3) D. W. Berry, A. M. Childs, R. Cleve, R. Kothari, and R. D. Somma, “Simulating Hamiltonian dynamics with a truncated Taylor series”, *Physical Review Letters* **114**, 090502 (2015).
Showed how to perform simulations of quantum systems with exponentially improved precision, using a technique simplified over my work in *STOC*. **48** citations.
- (4) D. W. Berry, A. M. Childs, R. Cleve, R. Kothari, and R. D. Somma, “Exponential improvement in precision for simulating sparse Hamiltonians”, in *Proceedings of the 46th Annual ACM Symposium on Theory of Computing (STOC 2014)*, pp. 283–292 (2014).
This work is published in the highly prestigious conference [STOC](#), and shows how to perform quantum simulation with far greater accuracy than previously known. **49** citations.
- (5) H. Yonezawa, D. Nakane, T. A. Wheatley, K. Iwasawa, S. Takeda, H. Arao, K. Ohki, K. Tsumura, D. W. Berry, T. C. Ralph, H. M. Wiseman, E. H. Huntington, and A. Furusawa, “Quantum-enhanced optical-phase tracking”, *Science* **337**, 1514 (2012).
Experimentally demonstrated how to measure a fluctuating phase highly accurately using squeezed states, based on my earlier theoretical work. **102** citations.
- (6) G. Y. Xiang, B. L. Higgins, D. W. Berry, H. M. Wiseman, and G. J. Pryde, “Entanglement-enhanced measurement of a completely unknown phase”, *Nature Photonics* **5**, 43 (2011).
Experimentally demonstrated how to use multiple entangled states to achieve an improvement in precision measurement, without needing to rely on initial information. I was lead theoretician on this work. **142** citations.
- (7) B. L. Higgins, D. W. Berry, S. D. Bartlett, H. M. Wiseman, and G. J. Pryde, “Entanglement-free Heisenberg-limited phase estimation”, *Nature* **450**, 393 (2007).
Demonstrated the most accurate possible phase measurements, as well as a routine required for quantum computing, in optics for the first time. I was lead theoretician, and it was based on my previous theoretical work. **332** citations.
- (8) D. W. Berry, G. Ahokas, R. Cleve, and B. C. Sanders, “Efficient quantum algorithms for simulating sparse Hamiltonians”, *Communications in Mathematical Physics* **270**, 359 (2007).
Provided the most efficient algorithm for simulation of quantum systems at the time, and now is the basis for a range of important new quantum algorithms. **246** citations.
- (9) D. W. Berry and B. C. Sanders, “Optimal remote state preparation”, *Physical Review Letters* **90**, 057901 (2003).
Showed how to perform remote state preparation with the least possible communication; an essential result needed for the theory of quantum capacities developed by leading researchers such as Charles Bennett. **214** citations.
- (10) D. W. Berry and H. M. Wiseman, “Optimal states and almost optimal adaptive measurements for quantum interferometry”, *Physical Review Letters* **85**, 5098 (2000).
First developed the sophisticated feedback methods for high-precision interferometric measurements with nonclassical states. These methods are used in the Nature paper above, and many others. **143** citations.

Conference Invitations

- Quantum Summit 2017 (Chendu, October 11-17, 2017).
D. W. Berry, A. M. Childs, A. Ostrander, and G. Wang, “Quantum algorithm for linear differential equations with exponentially improved dependence on precision”
<http://qmeeting.org/quantum-summit-2017/invited-speakers/>
- The 4th biennial China–Australia Quantum Control Workshop (Hefei, September 25-28, 2016).
D. W. Berry, H. T. Dinani, K. R. Motes, Z. Huang, H. M. Wiseman, P. M. Anisimov, J. P. Dowling, “Advanced in adaptive phase measurement for nonclassical states”
<http://lqcc.ustc.edu.cn/CAQCW16/?pageIndex=2>
- Recent Advances in Quantum Metrology (Warsaw, March 2-4, 2016).
D. W. Berry, M. Tsang, M. J. W. Hall, H. M. Wiseman,
“Quantum Bell-Ziv-Zakai bounds and Heisenberg limits for waveform estimation”
<http://raqm.phoqus.fuw.edu.pl/>
- **Plenary speaker:** International Conference on Quantum Information Processing and Communication (QIPC) (Leeds, September 13-18, 2015).
D. W. Berry, A. Aspuru-Guzik, A. M. Childs, R. Kothari, R. Cleve, and R. D. Somma,
“Advances in quantum algorithms for Hamiltonian simulation”
QIPC is one of the premier regular conferences on quantum information, and has been held since 2000.
<http://www.qipc2015.leeds.ac.uk/home/plenary-speakers.html>
- Last Frontiers in Quantum Information Science 3 (Homer Alaska, June 22-26, 2015).
D. W. Berry, A. Aspuru-Guzik, A. M. Childs, R. Kothari, R. Cleve, and R. D. Somma,
“Advances in quantum algorithms for Hamiltonian simulation”
<http://137.229.43.8/LFQIS-3/>
- Heilbronn Quantum Algorithms Meeting (Bristol, April 13-14, 2015).
D. W. Berry, A. Aspuru-Guzik, A. M. Childs, R. Kothari, R. Cleve, and R. D. Somma,
“Advances in quantum algorithms for Hamiltonian simulation”
https://www.maths.bris.ac.uk/events/meetings/meeting/index.php?meeting_id=144
- **Keynote speaker:** Quantum Simulations and Quantum Walks 2014 (Durban, November 24-28, 2014). D. W. Berry, A. M. Childs, R. Cleve, R. Kothari, and R. D. Somma,
“Hamiltonian simulation with nearly optimal dependence on all parameters”
<http://quantum.ukzn.ac.za/events/QSQW2014>
- Australia-Japan Workshop on Multi-user Quantum Networks (Sydney, October 22-24, 2014).
D. W. Berry, A. M. Childs, R. Cleve, R. Kothari, and R. D. Somma,
“Exponential improvement in precision for simulating sparse Hamiltonians”
<http://quantum-lab.org/ajw2014.php>
- 3rd Biennial Australia-Japan Workshop on Multi-user Quantum Networks (Sydney, October 22-24, 2014). D. W. Berry, A. M. Childs, R. Cleve, R. Kothari, and R. D. Somma,
“Exponential improvement in precision for simulating sparse Hamiltonians”
<https://www.griffith.edu.au/conference/china-australia-quantum-control-workshop/speakers2>
- Aspen Winter Conference on Advances in Quantum Algorithms and Computation (Aspen, March 9-14, 2014). D. W. Berry, A. M. Childs, R. Cleve, R. Kothari, and R. D. Somma,
“Exponential improvement in precision for simulating sparse Hamiltonians”
<http://www.aspenphys.org/physicists/winter/2014/quantum/Participants.html>

- American Physical Society March Meeting (Denver, March 3-7, 2014).
D. W. Berry, A. M. Childs, R. Cleve, R. Kothari, and R. D. Somma,
“Exponential improvement in precision for simulating sparse Hamiltonians”
The APS March Meeting is the main conference organised by the American Physical Society,
and attracts thousands of participants each year.
http://meetings.aps.org/Meeting/MAR14/APS_Invited
- China-Australia Quantum Control Workshop (Beijing, November 5-8, 2012).
D. W. Berry, M. J. W. Hall, M. Zwierz, and H. M. Wiseman,
“Universality of the Heisenberg Limit for Estimates of Random Phase Shifts”
- ONR Entanglement Beyond the Optical Regime (Anaheim, February 8-11, 2010).
D. W. Berry, G. Y. Xiang, B. L. Higgins, H. M. Wiseman, and G. J. Pryde,
“Entanglement-enhanced measurement of a completely unknown phase”
This was an invitation-only event organised by the Office of Naval Research, with the top
researchers in the area of quantum metrology.
https://secure.onr.navy.mil/events/docs/587_Agenda_020310.pdf
- DEX-SMI workshop on quantum statistical inference (Tokyo, March 2-4, 2009).
D. W. Berry, B. L. Higgins, H. M. Wiseman, S. D. Bartlett, M. W. Mitchell, and G. J. Pryde,
“Phase measurements at the theoretical limit”
<http://www.math.nagoya-u.ac.jp/~masahito/workshop/program-NII.html>
- **Keynote speaker:** The Principles and Applications of Control in Quantum Systems
(PRACQSYS), (Sydney, July 9-13, 2007). B. L. Higgins, D. W. Berry, S. D. Bartlett, H. M.
Wiseman, and G. J. Pryde, “Theory of entanglement-free Heisenberg-limited phase estimation”
<http://www.physics.usyd.edu.au/quantum/PRACQSYS2007/agenda.html>
- Third Feynman Festival, 2006 (unable to attend).
- XI International Conference on Quantum Optics (Minsk, May 26-31, 2006). D. W. Berry,
“Implementation of multipartite unitary operations with limited resources”
<http://master.basnet.by/icqo2006/Programme.htm>
- SPIE International Symposium on Optics and Photonics (San Diego, CA, July 31 – August 4,
2005). D. W. Berry, “Qubit channels that achieve capacity with two states”
- X International Conference on Quantum Optics (Minsk, May 30 – June 3, 2004).
D. W. Berry, S. Scheel, C. R. Myers, B. C. Sanders, P. L. Knight, and R. Laflamme,
“Postprocessing single photon sources via linear optics and photodetection”
<http://master.basnet.by/icqo2004/programme.htm>

Major conferences (presenting author underlined)

My work has been accepted at both STOC and FOCS. These are the two most prestigious conferences in the area of computer science, and are regarded as the equivalent of Science and Nature for the physical sciences. No other quantum information researcher currently at Macquarie University has had their work accepted in FOCS or STOC. (Professor Igor Shparlinski had work accepted in FOCS, but since then he has moved to University of New South Wales.)

1. D. W. Berry, A. M. Childs, and R. Kothari (upcoming), “Hamiltonian simulation with nearly optimal dependence on all parameters”, FOCS 2015: 56th Annual Symposium on Foundations of Computer Science (Berkeley, October 18-20, 2015).
<http://www.cs.cmu.edu/~venkatg/focs15-acceptedpapers.html>
2. D. W. Berry, A. M. Childs, R. Cleve, R. Kothari, and R. D. Somma, “Exponential improvement in precision for simulating sparse Hamiltonians”, STOC 2014: 46th Annual Symposium on Theory of Computing (New York, May 31 – June 3, 2014).
<http://www.columbia.edu/~cs2035/stoc/stoc2014/program.shtml>

The most important and prestigious conference in the area of quantum information is **QIP**. **QIP** has a low rate of acceptance (20%), and at **QIP 2015** in Sydney only two other submissions from Australian researchers were accepted as talks. No other researcher at Macquarie University had

their work accepted as a talk at **QIP 2015**, or at any **QIP** conference. My work has been accepted for oral presentation at **4 QIP** conferences, and poster presentation at another two.

3. D. W. Berry, A. M. Childs, A. Ostrander, and G. Wang, “Quantum algorithm for linear differential equations with exponentially improved dependence on precision”, poster presentation at QIP 2017 – The 20th Conference on Quantum Information Processing (Seattle, January 16-20, 2017).
<https://stationq.microsoft.com/qip-2017details/>
4. D. W. Berry, A. M. Childs, and R. Kothari, “Hamiltonian simulation with nearly optimal dependence on all parameters”, oral presentation at QIP 2015 – The 18th Conference on Quantum Information Processing (Sydney, January 12-16, 2015).
<http://www.quantum-lab.org/qip2015/AcceptedTalks.php>
5. D. W. Berry, R. Cleve, and S. Gharibian, “Exponential improvement in precision for Hamiltonian-evolution simulation”, and A. M. Childs, and R. Kothari, “Quantum simulation of sparse Hamiltonians and continuous queries with optimal error dependence”, oral presentation at QIP 2014 – 17th Conference on Quantum Information Processing (Barcelona, February 03-07, 2014).
<http://benasque.org/2014QIP/cgi-bin/program.pl>
6. D. W. Berry, R. Cleve, and S. Gharibian, “Gate-Efficient Discrete Simulations of Continuous-Time Query Algorithms”, poster presentation at QIP 2013 – 16th Workshop on Quantum Information Processing (Beijing, January 21-25, 2013).
<http://conference.iis.tsinghua.edu.cn/QIP2013/poster-session.html>
7. D. W. Berry, R. Cleve, and S. Gharibian, “Discrete simulations of continuous-time query algorithms that are efficient with respect to queries, gates and space”, oral presentation at QIP 2012 – 15th Workshop on Quantum Information Processing (Montreal, December 12-16, 2011).
http://www.iro.umontreal.ca/~qip2012/scientific_e.php
8. D. W. Berry (unable to attend), “Quantum algorithm for solving linear differential equations”, poster presentation at QIP 2011 – 14th Workshop on Quantum Information Processing (Singapore, January 10-14, 2011).
<http://qip2011.quantumlab.org/scientificprogramme/postersession.php>
9. D. W. Berry and A. M. Childs, “The query complexity of Hamiltonian simulation and unitary implementation”, oral presentation at QIP 2010 – 13th Workshop on Quantum Information Processing (Zurich, January 15-22, 2010).
<http://www.qip2010.ethz.ch/programme>

All Conferences (presenting author underlined)

10. H. T. Dinani, D. W. Berry, and H. M. Wiseman, “Adaptive estimation of time-varying phase with power-law spectrum”, oral presentation at APPC-AIP Congress (Brisbane, December 4-8, 2016).
11. D. W. Berry and L. Novo, “Corrected quantum walk for optimal Hamiltonian simulation”, oral presentation at APPC-AIP Congress (Brisbane, December 4-8, 2016).
12. R. Babbush, D. W. Berry, I. Kivlichan, A. Wei, D. Southwood, P. Love and A. Aspuru-Guzik, “Higher-Efficiency Quantum Algorithms for Simulation of Chemistry”, long talk at the 16th Asian Quantum Information Science Conference (Taipei, August 29 – September 2, 2016).
13. H. T. Dinani, M. Gupta, D. W. Berry, and J. Dowling, “Quantum enhanced absorption spectroscopy”, oral presentation at CLEO/Europe – EQEC 2015 (Munich, June 21-25, 2015).
14. D. W. Berry, M. Tsang, M. J. W. Hall, and H. M. Wiseman, “The Heisenberg limit for a varying phase”, oral presentation at the Australian Institute of Physics Congress (Canberra, December 7-11, 2014).
15. H. T. Dinani and D. W. Berry, “Loss-resistant unambiguous phase measurement”, oral presentation at the Australian Institute of Physics Congress (Canberra, December 7-11, 2014).

16. M. Ringbauer, A. Fedrizzi, D. W. Berry, and A. G. White, “Quantum correlations beyond Tsirelson’s bound”, oral presentation at CLEO: Conference on Lasers and Electro-Optics (San Jose, June 8-13, 2014).
17. D. W. Berry, R. Cleve, and R. D. Somma, “Hamiltonian simulation with complexity polylogarithmic in the error”, oral presentation at the 13th Asian Quantum Information Science Conference (Chennai, August 25-30, 2013).
18. H. T. Dinani and D. W. Berry, “Loss resistant phase measurement”, poster presentation at Quantum Information Processing and Communication International Conference (Florence, June 30 – July 5, 2013).
19. D. W. Berry, M. J. W. Hall, and H. M. Wiseman, “The stochastic Heisenberg limit”, oral presentation at CLEO: Conference on Lasers and Electro-Optics (San Jose, June 9-14, 2013).
20. D. W. Berry, R. Cleve, and S. Gharibian, “Gate-Efficient Discrete Simulations of Continuous-Time Query Algorithms”, oral presentation at the 12th Asian Quantum Information Science Conference (Suzhou, August 23-26, 2012).
21. M. J. W. Hall, D. W. Berry, M. Zwierz, and H. M. Wiseman, “Universality of the Heisenberg Limit for Estimates of Random Phase Shifts”, oral presentation at the Quantum Electronics and Laser Science Conference (San Jose, May 6-11, 2012).
22. D. W. Berry, “Quantum Algorithm for Solving Linear Differential Equations”, oral presentation at the 11th Asian Quantum Information Science Conference (Busan, August 23-30, 2011).
23. D. W. Berry and A. I. Lvovsky, “Conservation of Vacuum in an Interferometer”, oral presentation at the Quantum Electronics and Laser Science Conference (Baltimore, May 1-6, 2011).
24. D. W. Berry and A. I. Lvovsky, “Conservation of Vacuum in an Interferometer”, oral presentation at the APS March meeting (Dallas, March 21-25, 2011).
25. D. W. Berry, G. Y. Xiang, B. L. Higgins, H. M. Wiseman, and G. J. Pryde, “Entanglement-enhanced measurement of a completely unknown phase”, oral presentation at the Quantum Electronics and Laser Science Conference (San Jose, May 16-21, 2010).
26. D. W. Berry and A. M. Childs, “The complexity of implementing $N \times N$ black-box unitaries is $O(N^{3/4})$ ”, oral presentation at the 9th Asian Conference on Quantum Information Science (Nanjing, August 26-29, 2009).
27. D. W. Berry, B. L. Higgins, H. M. Wiseman, S. D. Bartlett, M. W. Mitchell, and G. J. Pryde, “Theory for Heisenberg Limited Phase Measurement”, oral presentation at the 18th National AIP Physics Congress (Adelaide, November 30 – December 5, 2008).
28. D. W. Berry, H. Jeong, M. Stobińska, and T. C. Ralph, “The CHSH-Bell inequality and Tsirelson’s bound with postselection”, oral presentation at the Quantum Electronics and Laser Science Conference (San Jose, May 4-9, 2008).
29. D. W. Berry, B. L. Higgins, S. D. Bartlett, H. M. Wiseman, and G. J. Pryde, “Entanglement-free Heisenberg-limited phase estimation”, oral presentation at Noise Information & Complexity @ Quantum Scale (Erice, November 4-10, 2007).
30. D. W. Berry, “Remote implementation of multipartite unitary operations”, poster presentation at AIP Congress, (Brisbane, December 3-8, 2006).
31. D. W. Berry, H. M. Wiseman, and E. Huntington, “Adaptive Phase Measurements for Narrowband Squeezed Beams”, oral presentation at the Quantum Electronics and Laser Science Conference (Long Beach, May 21-26, 2006).
32. D. W. Berry, “Qubit channels that achieve capacity with two states”, poster presentation at the Australasian Conference on Optics, Lasers and Spectroscopy (Rotorua, December 5-9, 2005).
33. D. W. Berry, “Qubit channels that achieve capacity with two states”, poster presentation at the ERATO conference on Quantum Information Science (Tokyo, August 26-30, 2005).

34. M. G. Raymer, A. C. Funk, and D. W. Berry, “Secure quantum key distribution using squeezed macroscopic light pulses”, oral presentation at the SPIE International Symposium on Optics and Photonics (San Diego, July 31 - August 4, 2005).
35. D. W. Berry, S. Scheel, C. R. Myers, B. C. Sanders, P. L. Knight and R. Laflamme, “Improving single-photon sources via linear optics and photodetection”, oral presentation at Fluctuations and Noise in Photonics and Quantum Optics II (Gran Canaria, Spain, 25-28 May 2004).
36. D. W. Berry, S. Scheel, C. R. Myers, B. C. Sanders, P. L. Knight, and R. Laflamme, “Postprocessing single photon sources via linear optics and photodetection”, oral presentation at the Quantum Electronics and Laser Science Conference (San Francisco, May 16-21, 2004).
37. A. C. Funk, M. G. Raymer, and D. W. Berry, “Experimental demonstration of secure quantum key distribution using macroscopic non-classical optical pulses”, oral presentation at the Quantum Electronics and Laser Science Conference (San Francisco, May 16-21, 2004).
38. D. W. Berry, S. Scheel, C. R. Myers, B. C. Sanders, P. L. Knight, and R. Laflamme, “Improving single photon sources via linear optics and photodetection”, oral presentation at the Australasian Conference on Optics, Lasers and Spectroscopy (Melbourne, December 1-4, 2003).
39. D. W. Berry and B. C. Sanders, “Numerical analysis of capacities for two-qubit unitary operations”, poster presentation at the 4th European QIPC Workshop (Oxford, July 13-17, 2003).
40. D. W. Berry and B. C. Sanders, “Quantum teleportation and entanglement swapping for spin systems”, oral presentation at the Quantum Electronics and Laser Science Conference (Long Beach, May 19-24, 2002).
41. D. W. Berry and B. C. Sanders, “Quantum teleportation and entanglement swapping for systems of arbitrary spin”, oral presentation at the Australasian Conference on Optics, Lasers and Spectroscopy (Brisbane, December 3-6, 2001).
42. D. W. Berry and H. M. Wiseman, “Adaptive measurements and Optimal states for Quantum Interferometry”, oral presentation at the Quantum Electronic and Laser Science Conference (Baltimore, May 6-11, 2001).
43. D. W. Berry and B. C. Sanders, “Numerical analysis of capacities for two-qubit unitary operations”, poster presentation at the 4th European QIPC Workshop (Oxford, July 13-17, 2003).
44. D. W. Berry and B. C. Sanders, “Quantum teleportation and entanglement swapping for spin systems”, oral presentation at the Quantum Electronics and Laser Science Conference (Long Beach, May 19-24, 2002).
45. D. W. Berry and B. C. Sanders, “Quantum teleportation and entanglement swapping for systems of arbitrary spin”, oral presentation at the Australasian Conference on Optics, Lasers and Spectroscopy (Brisbane, December 3-6, 2001).
46. D. W. Berry and H. M. Wiseman, “Adaptive measurements and Optimal states for Quantum Interferometry”, oral presentation at the Quantum Electronic and Laser Science Conference (Baltimore, May 6-11, 2001).

Service

- I served on the program committee to help organise TQC 2017 – The Conference on the Theory of Quantum Computation, Communication and Cryptography.
<http://tqc2017.lip6.fr/committees.html>
- I was on the program committee for QIP 2016 – the 19th Workshop on Quantum Information Processing. QIP is the most important conference in the area of quantum information.
<http://ucalgary.ca/qip2016/home/committees>
- I was on the program committee to organise AQIS’16 – the 16th Asian Quantum Information Science Conference.

<http://aqis-conf.org/2016/committees/>

- I am an editor for the Nature Publishing Group journal Scientific Reports.
- To build public outreach, on July 20, 2015 I gave a public lecture to the Australian Computer Society titled “QUANTUM COMPUTING - What Can You Do with a Quantum Computer?” I am also helping to organise a Quantum Computing Special Interest Group for the Australian Computer Society.
<https://acs.org.au/networking-and-events/past-event-videos/quantum-computing-what-can-you-do-with-a-quantum-computer/> nocache
- In 2013 I produced a 23 minute video explaining the basics of quantum computing, which I posted to YouTube.
<http://www.youtube.com/watch?v=8fku9iryXGY>
- On September 4-12, 2013, I gave a series of three lectures on introductory quantum algorithms for the Department of Computer Science, as well as the Department of Physics and Astronomy.
- On June 18-21, 2013 I gave a series of three invited lectures on methods for quantum algorithms at the Thirteenth Annual Canadian Summer School on Quantum Information (CSSQI), held at the Institute for Quantum Science and Technology (IQST) at the University of Calgary.
- Since 2014 I have organised the seminars for QSciTech. In 2015 I changed the format to the new Quantum Frontiers seminar series, with seminars from prominent researchers from around Australia, such as Andrew Doherty, Peter Drummond, and Jon Dowling.
- I have recently joined the Research Committee for the Department of Physics and Astronomy.
- I help with the Macquarie University open days.
- In 2010 I acted as an examiner for a PhD thesis for the University of Adelaide.
- I am currently (in 2016) acting as a PhD thesis examiner for the University of Western Australia.
- In the first semester of 2007 I organised problem solving sessions on quantum information.
- I frequently referee for many journals, and in 2013 was selected as an **outstanding referee** by the American Physical Society (<http://journals.aps.org/OutstandingReferees>). One paper I refereed (and made crucial suggestions to) now has over 1000 citations. Journals I have refereed for include:
 - Nature & Nature Photonics
 - Physical Review Letters & Physical Review A
 - Communications in Mathematical Physics
 - Quantum Information and Computation
 - IEEE Transactions on Information Theory
 - Journal of the Optical Society of America B
 - Journal of Physics A & B
 - New Journal of Physics
 - Physics Letters A
 - Optics Communications
 - International Journal of Quantum Information

Teaching Experience

- Since 2012, as well as in 2008, I taught half the advanced course “Math Methods”. This was a fourth year honours course up until 2012, and since 2013 it has been a Masters course, PHYS701. I am the course convenor, and so prepare the unit guide, set the syllabus, and organise the final exam. I wrote up a comprehensive set of notes, over 60 pages long. Each year I have made further improvements to these notes, based on the student feedback. In the TEDS surveys the students have particularly noted how helpful the notes are. This course is on mathematical methods in physics, and the course is organised so each lecture is followed by a tutorial. This helps the students to quickly gain experience in applying the techniques taught in the lectures.
- I have participated in many courses with the Learning and Teaching Centre (LTC) to enhance my teaching skills.

1. In 2013 I completed the course Foundations in Learning and Teaching (FILT), a comprehensive 5-day course that explores many aspects of teaching practice. As part of this I attended a lecture from one of my colleagues (Alexei Gilchrist), and took notes of his methods to further enhance my teaching practice. I also had him attend some of my lectures, and give feedback. I wrote a detailed FILT reflection, analysing what I had learnt from this exercise, as well as synthesising what I had learnt from the course, and examining my professional development needs.
 2. In 2014 I attended the LTC Workshop – How to ‘Flip’ your Classroom and Encourage Active Learning. I was motivated to attend this course by issues that were raised in the FILT course, about ways to encourage active learning. I attended this workshop to learn more about the flipped classroom model, which may be a useful way of encouraging active learning. Based on the course I decided that it may be very time consuming to organise, and the advantage for teaching Physics is not clear. Therefore I am not currently planning to use this method, but am keeping it in mind for the future.
 3. In 2012 I attended the HDR Supervision Enhancement Program (SEP) Initial Workshop. That was when I started supervising my PhD student, Hossein Dinani, so this workshop helped me to learn effective ways to get him started on the project. In addition, I was interested to discuss how to strike the right balance between giving students help, and allowing them to develop as an independent researcher.
 4. In 2014 I attended the LTC workshop SEP Update: Supervising to Completion. This was because my PhD student is completing in 2016. In this workshop I learnt about techniques for managing completion of his project to ensure that he completes successfully.
 5. In 2015 I attended the LTC workshop SEP Update: Examining a Thesis. This was primarily to learn about the examination process, and what makes an excellent thesis, as my PhD student was about to begin writing his thesis. It was also because I have previously examined a thesis, and the requirements for assessment were not made clear.
- I recently completed supervising the PhD student Hossein Dinani, and he now has a CONICYT fellowship at Pontificia Universidad Católica de Chile. At the beginning of his PhD candidature I taught him how to perform CUDA parallel programming for GPUs, and he performed advanced research in quantum metrology using CUDA. I am guiding him through multiple sub-projects, which have resulted in three publications, and three presentations at conferences.
 1. One sub-project, which has results already published in Physical Review A, is on methods for creating loss-resistant states and performing adaptive measurements with multiple states. He presented this work at the AIP Congress in 2014, and QIPC 2013.
 2. He has shown how to use swarm optimisation for NV centre magnetometry, and we have collaborated with researchers at Delft University of Technology to achieve experimental demonstration. This work was published in Nature Nanotechnology.
 3. He determined optimal states for metrology where both the loss and phase information are used to estimate a transition frequency. This work was published in Physical Review A, and he presented the work at CLEO/Europe. This work is in collaboration with Jonathon Dowling.
 4. He examined methods of adaptive measurements with squeezed states for phase variation with a range of spectra. We are preparing a paper on this work.
 - In 2015 managed tutorial classes for PHYS143, running tutorials and organising two junior tutors.
 - In 2015 I performed marking of assignments for PHYS201.
 - In 2007 I gave lectures and set assignment questions for part of a fourth year honours course on quantum information at Macquarie University. I also set questions for an informal reading course on quantum information for PhD students.

- I taught a component of a fourth year honours course at Macquarie University in 2003. I gave a series of lectures on Fourier analysis, set assignments and set an exam question.
- I gave a lecture on quantum algorithms as part of an honours course at Macquarie University in 2002.
- As a Tutorial Assistant at the University of Queensland in 1999-2001 I organised the laboratory component of a course on engineering physics. I wrote the laboratory manual, organised tutors to supervise the experiments and supervised experiments myself. The laboratory manual I wrote was still in use several years later.

Referees

Professor Howard M. Wiseman

Position: Professor and Director, Centre for Quantum Dynamics
 Address: Centre for Quantum Dynamics
 Griffith University
 Nathan, QLD 4111, Australia
